Human G-protein coupled glycoprotein hormone receptor HG38. Claim 1a; Fig 2; 74pp; English. This invention describes a novel human G-protein coupled glycoprotein hormone receptor. HG38. Glycoprotein hormone receptors are important in the endocrine system and HG38 may be involved in development and function of the skeletal muscle, spinal cord, placenta and to a lesser extent, the brain. The transgenic animal may be useful for studying tissue and temporal specific expression or activity of the HG38 receptor, as well as for studying the ability of a variety of compounds to act as modulators of HG38 receptor activity

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-CAAY90647 and AAY906843-A90684), and to DNA encoding them (AAA3079-A30743) and AAA30775-A30779). The mutant proteins of the invention contain a contain a mataion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TM6). A non-endogenous anino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino acid 8 N-terminal of an endogenous proline in IC3 at a position 16 amino acid 8 N-terminal of an endogenous proline in IC3 at a position 16 acids N-terminal of an endogenous proline in IC3 at a position 16 acids N-terminal of an endogenous proline in IC3 at a position 16 acids N-terminal of an endogenous proline in IC3 at a position 16 acids N-terminal of an endogenous proline in IC3 at a position 16 acids N-terminal of an endogenous proline in IC3 at a position 16 acids N-terminal of acids stretch between the substituted amino acid and the Pro may be endogenous, non-endogenous, or a mixture of endogenous and non-endogenous cresidues. The constitutively active GPCRs are useful for identifying antagonists and partial agonists for use as pharmaceutical containing the roles of the receptors in normal and diseases and disorders associated with that receptors in normal and diseases and compounds without the need for endogenous ligands. The present sequence corpusion of the invariant processing the in an exemplification of the invariant processing the compounds without the need for endogenous ligands. The present sequence the invariant processing the compounds without the need for endogenous ligands. The present sequence the invariant processing the constitution of the processing the constitution of the constitutio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           LQNNQLRHVPTEALQNLRSLQSLRLDANHISYVPPSCFSGLHSLRHIWLDDNALTEIPVQ 180

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino conditions. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a capdidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for carearing immune-related diseases, growth-related cell proliferative comparation-related diseases, immunological-related cell proliferative diseases, autoimmune diseases, immunological-related cell proliferative diseases, bacterial fungal, photozoan or viral infections, atherostribritis, osteoporosdia, cancer, cardiomyopathy, chronic and acute inflammation, allergies, CPCPM-adiabetes, graft versus host disease, parkinson's disease, multiple sclerosis, pain, psoriasis, concertions and such antibodies may be used in immunoaseaye and immunodiagnosis, ABP82123 to AB242869 encode GPCR proteins given invention invention (GPCR proteins given invention invention).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

The invention relates to an isolated HGPRBMYS polypeptide. The polypeptides, polynucleotides and methods are useful for preventing, treating or ameliorating a medical condition such as a neoplastic disorder e.g. leukaemia and breast cancer; immune disorder e.g. Alzheimer's disease and renumatoid arthritis; neuronal disorder e.g. Alzheimer's disease and parcosast's syndrome; ovaryan disorder e.g. bronchopulmonary disease and pancosast's syndrome; ovaryan disorder e.g. ovarian carcinoma and meig's syndrome; colon disease, breast disease; thalamus related disorder; amygdala related disorder; gorpus callosum related disorder; caudate nucleus related disorder; hippocampus related disorder by administering the GPCR polypeptide or its homologue. The present sequence represents the amino acid sequence of a G-protein coupled receptor used to show homology with the human G-protein coupled receptor, HGPCRBMY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

The invention relates to a method for treating a non-endogenous, constitutively active version of an endogenous human G protein-coupled receptor (GPCR) that has a transmembrane 6 (TWG) region and an intracellular-3 (TG3) region, by substituting a specific amino acid in the TWG region with a different amino acid, and testing for constitutive activity. The method is useful for creating a constitutively active version of an endogenous human GPCR that comprises a transmembrane 6 region and an intracellular loop 3 region. The altered human GPCR polypeptides are useful for sorreming test compounds for identification of inverse agonists or partial agonists of GPCR polypeptides, which may have therapeutic uses. The altered GPCRs may also be used in vivo or in troi in biological research. A nucleic acid encoding the altered GPCR may be used to create a transgenic animal expressing the altered GPCR. The method allows screening for compounds that modulate the activity of human G protein-coupled receptor without the need for provision of a ligand for the receptor. This is particularly useful in allowing screening of compounds against orphan receptors for which no ligand is currently known. This sequence represents a human GPCR polypeptide of the

The invention discloses a composition comprising two or more isolated rat or human polynuclectides or a polynuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynuclectide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the
                                                                                                             840

polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

The invention discloses a composition comprising two or more isolated rate or human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the movel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a gent to particular the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polymetides given in the specification, a method for identifying a compound or small molecule that regulates the cativity in an animal of one or more of the polymetides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polymetides or their antibodies. The polymucleotide or the compound that compound that modulates its activity is useful for preparing a medicament for treating modulates its activity is useful for preparing a medicament for treating modulates its activity is useful for preparing a medicament for treating

injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene, therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the posinted specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes a new isolated polypeptide comprising: a polypeptide or its mature form comprising a sequence not given in the specification; or a variant of (A), where one or more amino acid residues in the variant differs in no more than 15% from the amino acid sequence of the mature form. The pharmaceutical composition may be administered via oral, transdermal, rectal or parenteral route. The polypeptide, nucleic acid or antibody is useful for preparing a composition for treating or preventing a NOVA-associated disorder, e.g. cancer. This is the amino acid sequence of a transmembrane receptor homologue used in a comparison with the novel human proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a constitutively active, non-endogenous version of an endogenous human G protein-coupled receptor (GPCR). The GPCR is used for screening therapeutic compounds as inverse agonists, agonists or partial agonists. The GPCR can be also be used to elucidate and understand the roles of GPCRs in normal and diseased humans. The GPCR or need not be purified and isolated to be used to screen for therapeutic compounds. The utility of the GPCR as a research tool is enhanced because the role of a particular receptor can be understood before the endogenous ligand is identified. The present sequence is used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                The invention relates to nucleic acids and proteins (ADN38683-ADN40464)

whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a patient by detecting a mucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising a nucleic acid of the invention; antibodies which specifically bind a polypeptide of the invention; use of such antibodies for drageting; and methods of screening for modulators of activity or expression of the polypeptides and nucleic acids. The nucleic acids, polypeptides, and methods are useful for diagnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease, atherosclerosis, inflammatory diseases, autoimmune diseases, retinal neovascularistation syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

```
The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
whose expression is upregulated or downregulated in specific cancers or
other diseases such as angiogenic or fibrotic disorders, and to methods
of determining the presence or absence of a pathological cell in a
patient by detecting a mucleic acid at least 80% identical to those of
the invention or by detecting a polypeptide of the invention. The
invention also relates to expression vectors and host cells comprising a
nucleic acid of the invention; use of such antibodies for drug targeting;
and methods of screening for modulators of activity or expression of the
polypeptides and nucleic acids. The nucleic acids, polypeptides,
antibodies and methods are useful for diagnosing, prognosing and treating
cancer and other conditions such as psoriasis, ischaemia, heart disease,
attherosclerosis, inflammators of serving and uterine fibroids. They may
also be useful in wound healing and in contraception. The present
sequence represents a polypeptide of the invention.
                                                                                                                                     Determining the presence or absence of a pathological cell in a patient, useful for diagnosing, prognosing or treating cancer, comprises detecting a nucleic acid in a biological sample.

The polypeptide of the invention, and polypeptide of the invention, and polypeptide of the invention, used for an antibodies for drug targeting, and methods of screening for modulators of activity or expression of the polypeptides and nucleic acids. The nucleic acids, polypeptides, antibodies and methods are useful for diagnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease, attribudies and methods are useful for diagnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease, attribudies and methods are useful for diagnosing, prognosing and treating and electronsis, inflammatory diseases, autoimmune diseases, retinal neovascularistaion syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                            Determining the presence or absence of a pathological cell in a patient, useful for diagnosing, prognosing or treating cancer, comprises detecting a nucleic acid in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PSNLSVPTSYLDLSMNNISQLLPNPLPSLRFLEELRLAGNALTYIPKGAFTGLYSLKVLM 120

Identifying a mammal that will respond therapeutically to a method of treating cancer comprises comparing the level of a biomarker in a mammal

N-PSDB; ADQ80249

780 780 840 900

```
The invention relates to a method of identifying a mammal that will respond therapeutically to a method of treating cancer by administering an epidermal growth factor receptor (EGPR) modulator by comparing the level of a biomarker in a mammal before and after exposure to an EGPR modulator. The method comprises: (a) measuring, in the mammal, the level of a least one biomarker identified in the specification; (b) exposing the mammal to the EGPR modulator; and (c) measuring in the mammal the level of the biomarker, where a difference in the level in step (c) compared to step (a) indicates that the mammal will respond therapeutically to the method of treating cancer. The method and biomarkers are useful for identifying a mammal that will respond therapeutically to a method of treating cancer by administering an epidemal growth factor receptor (EGFR) modulator. This sequence corresponds to one of the biomarkers whose levels of expression is measured in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

known as HG38. The HG38 protein and corresponding nucleic acid, may be used in the method of the invention for detecting colon or lung cancer.

The first method involves performing an assay to determine the amount of HG38 in a sample of colon or lung tissue, and comparing the amount of protein to standard, thus detecting expression of protein in sample, where differential expression of protein in sample when compared with the involves hybridizing a composition comprising the HG38 coding sequence, or its complement, and a labelling moiety, to nucleic acids of a sample of comparing complex, detecting hybridization complex formation to a standard, where the comparison reflects the standard and is diagnostic of a colon or lung cancer. This first method enables earlier diagnosis before the pattent is symptomatic. Anti-HG38 antibodies are useful for treating colon or lung cancer.

                                                                                                                                                    embryonic tissues.

--- SUBCELLUIAR LOCATION: Integral membrane protein.
--- TISSUE SPECIFICITY: Expressed in the gonads, the adrenal gland, and in the brain. In the central nervous system expression is restricted to the olfactory bulb. In the adrenal gland detected only in the neural-creat derived chromomaffin cells of the medulla, but not in the calls of the adrenal cortex. In the gonads, the expression is high in Graafian follicle, but absent from primary and secondary follicles.
--- DEVELOPMENTAL STAGE: Expressed from embryonic day 10.5 (E10.58) in the developping spinal cord and in the neuroepipithelia of the myel-, met-, mes-, and diencephalon. Expression is transitory and the pattern changed rapidly.
--- SIMILARITY: Balongs to the G-protein coupled receptor 1 family.
--- SIMILARITY: Contains 17 leucine-rich (IRR) repeats.
                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright. Biophys. Kes. Commun. 282:757-764(2001).

-!- FUNCTION: Orphan receptor.

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- TISSUB SPECIFICITY: Expressed in multiple steroidogenic tissues:

-placenta, ovary, testis and adrenal. Expressed also in spinal cord, thyroid, stomach, trachea, heart, pancreas, kidney, prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PRINTS; PRO0373; GLYCHORMONER.

Jr.; "Molecular characterization of a novel glycoprotein hormone G-protein-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and spleen.
-!- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
-!- SIMILARITY: Contains 15 leucine-rich (LRR) repeats.
                                                                                                                    Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -i- FUNCTION: Orphan receptor.
-i- SUBCELLULAR LOCATION: Integral membrane protein.
-i- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
-i- SIMILARITY: Contains 15 leucine-rich (LRR) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Hsu S.Y., Liang S.-G., Hsueh A.J.W.;
"Characterization of two LGR genes homologous to gonadotropin and
thyrotropin receptors with extracellular leucine-rich repeats and
protein-coupled, seven-transmembrane region.";
Mol. Endocrinol. 12:1830-1845(1998).

                                                                           Nat. Genet. 36:40-45(2004).
-!- FUNCTION: Orphan receptor.
-!- SUBCELLUIAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
-!- SIMILARITY: Contains 11 leucine-rich (LRR) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LERR 1.
